## ANNUAL ENROLLMENT REPORT

2010-11 DATA

*Every student achieving, everyone accountable.*

## **PREFACE**

*On November 18, 2009, the Seattle Public Schools Board of Directors adopted the New Student Assignment Plan (NSAP). The NSAP provides for predictable geographic-based assignments, while still offering opportunities for school choice. Other features of the NSAP include feeder patterns from elementary to middle schools, a shift to offering services closer to where students who need those services live, and reduced expenditures for pupil transportation.*

*A determination was made to phase in the NSAP to avoid massive disruptions to students and families across the city. Therefore, an annual Transition Plan will guide implementation until the phase in is complete. Because changes to student assignment are so extensive, this Annual Enrollment Report provides a significantly expanded compilation of data than has typically been provided in the past. This will enable the Board and community to see the impact of the NSAP over the phase in period, and to have data available to inform future decisions.*

*January 2011*

## **Introduction and Overview**

This report presents October 1, 2010 enrollment data for the initial implementation year of the New Student Assignment Plan (NSAP). Information in this report is based on annual October 1 data for each year shown. October 1 enrollment data is used for historical tracking, comparisons, calculation of enrollment projections, and planning.

The purpose of this report is not to replace or duplicate information in the annual Data Profile: District Summary (although there is some overlap so the reader does not have to go back and forth between two documents). Rather, the purpose is to compile information related specifically to implementation of the NSAP and to assist in future implementation decisions.

All historical information has been regrouped to show what the information would have been had the new attendance and service areas been in effect for prior years. That is, prior years' data (such as numbers of students who live in a particular attendance or service area) aligns with the 2010 data.

The following comments are organized to parallel the presentation of the data in each section of the report.

### **Section 1: Summary of Enrollment Data**

District enrollment has been increasing since 2007, with two years of moderate overall growth followed by significant growth in 2010-11. Overall enrollment is up by more than 1,000 students this year over last, driven largely by a steady increase in kindergarten enrollment over the past five years. Kindergarten enrollment has increased by more than 650 students since 2006, including an increase of about 200 students this year over last. As these students move through the elementary grades, enrollment in grades 1-5 also continues to climb.

Growth in kindergarten enrollment is expected to continue. Births five years prior to kindergarten enrollment fluctuated between 2006 and 2010, ending up with a difference of about fifty more births feeding into 2010 enrollment than births feeding into 2006 enrollment. During that time period, however, the Birth-to-Kindergarten ratio<sup>1</sup> increased steadily, growing from 63% in 2006 to 73% in 2010. In fact, going back five more years, the Birth-to-Kindergarten ratio was only 58.6% in 2001, so the current ratio is the highest in over a decade.

At the middle school level (grades 6-8), this year's enrollment is almost back up to what it was five years ago, following a significant decline between 2006 and 2007. Enrollment at the high school level has been declining for a number of years, reflecting the smaller cohorts of students at lower grades moving through the district. High school enrollment declined by about 900 students from 2006 to 2010, although there was an increase of about 70 students this year over last year. As the larger elementary school cohorts move through middle and high school, those numbers will continue to increase.

Information is also provided on K-5, 6-8, and 9-12 enrollment based on where students live. This is broken down by service area (for elementary and middle school students) and by high school attendance area for high school students.

---

<sup>1</sup> This is the calculated ratio between the number of children born five years prior to kindergarten entry and the number of students who enter kindergarten each year.

Finally, comparative information is provided for all schools showing last year's enrollment, this year's enrollment, projection information, and the calculated 2015 functional capacity.

## **Section 2: Open Enrollment and School Choice Trends**

The tables in Section 1 show historical application, assignment, and waiting list data. This is a snapshot in time, as of the end of Open Enrollment. Students may be added to or assigned from waiting lists after Open Enrollment through September 30 each year. Because of changes in the assignment plan, 2010 data cannot appropriately be compared directly with data for 2010.

First choice assignment data is not comparable, since students who elected to maintain their Attendance Area or grandfathered assignment are not included in the data. Many students were automatically assigned to a school that, in the past, would have shown as a first choice application. Since the students were already assigned, many did not have to submit an application. Many of those students would, in the past, have shown in the counts for first choice assignments and/or waiting lists.

In addition, the Open Enrollment process was modified for 2010-11 to align with implementation of the NSAP. The following changes were implemented:

- Students enrolled in SPS in 2009-10, as well as new students who completed the early registration process, received an assignment letter prior to Open Enrollment that indicated the school they were assigned to for 2010-11. The letter also explained changes to the enrollment process for 2010-11 and the Open Enrollment process to follow for requesting assignment to a different school.
- The early “pre-registration process” that was implemented a few years ago allows incoming kindergarten and other new students to complete all of the necessary information (such as emergency contacts, address verification, and immunization records) over an extended period of time without having to wait for the spring Open Enrollment period. Because early registration provides the information needed to make the student’s initial assignment, these students receive the same initial assignment letter as current students prior to Open Enrollment. They may also submit a school choice application during Open Enrollment. The early sibling assignment process (as distinct from the registration process) is no longer applicable beginning in 2010.

As shown, for 2009-10 assignments (prior to implementation of the NSAP) there were about 12,500 Open Enrollment applications. For 2010-11 (the first year of plan implementation) there were fewer than half as many applications – about 5500.

Since students do not receive automatic assignments to Option schools, comparative data for the current and prior years is still useful. Of interest are the drop-offs in first choices applications for 6<sup>th</sup> grade at Salmon Bay (133 last year compared with 75 this year) and TOPS (87 last year compared with 33 this year). On the other hand, first choice applications for 9<sup>th</sup> grade at Cleveland almost tripled (from 49 last year to 144 this year) with the start-up of the STEM option school.

### **Section 3: Comparison of Enrollment and Attendance Area by Type of School and Level**

These tables show where students living in each attendance area are enrolled by type of school, including: home attendance area school, another attendance area school, an option school, or a service school (for middle and high school students).

As would be expected with implementation of the NSAP, the percentage of kindergarten students going to their attendance area school is typically much higher than for upper grades. As we go forward with implementation, this gives us a way to track the extent of plan implementation in different parts of the district.

Note that for students who live in the Rainier View and Viewlands attendance areas, none of those students are at their attendance area school since those schools will not open until 2011-12.

### **Section 4: Comparison of Enrollment and Attendance Areas**

For each school, these tables show where students attending the school live (by attendance area), and where students who live in each attendance area are enrolled. Note that, since Rainier View is not open this year and students in the Rainier View attendance area were assigned to Emerson, a large number of students in the Rainier View attendance area are enrolled at Emerson. The same applies to Viewlands and Broadview-Thomson. This will begin to shift next year when those two schools open.

### **Section 5: Kindergarten Siblings**

For the initial 2010-11 implementation year, several decisions were made to minimize disruptions to students. These included continuing (“grandfathering”) 2009-10 assignments for 2010-11 and guaranteeing a seat to all incoming kindergarten students (as well as 6<sup>th</sup> and 9<sup>th</sup> grade students) at their attendance area school. In addition, the commitment was to do everything reasonably possible to accommodate incoming kindergarten siblings of students enrolled at an attendance area school other than their home attendance area school.

Almost three-quarters (73%) of kindergarten siblings who applied during Open Enrollment for their sibling’s non-attendance area school were assigned to the sibling’s school, and 65% of attendance area schools had no kindergarten siblings on their waiting lists. Throughout the summer and early fall, waiting lists were actively and aggressively managed. The table shows the number of non-attendance area kindergarten siblings on each school’s waiting list (where applicable), and then the final number of students will on waiting lists at the end of September when waiting lists are abolished. During that time period, the number of waitlisted students went from 159 to 14.

This section also presents the compilation of survey information on younger (pre-kindergarten) siblings of enrolled students and the year of entry into kindergarten based on birth date. Also shown is the net impact on schools if younger siblings go to non-attendance area schools. This information was compiled by surveying families through the “Start of School” packet. It should be noted that this is not a comprehensive picture of future kindergarten enrollment, since not all families completed and returned the survey.

## **Section 6: High Schools – Enrollment Data**

This section provides information on high school enrollment from several different perspectives. Historical enrollment by school and grade is shown by both “grade” and “cohort” students. The information by “grade” is based on students’ official grade designation as of October 1 each year. In some cases, a student’s grade does not align with the number of years the student has been in high school.

There is an automated process that reviews student transcripts and, if a certain number of credits have not been earned, the student will officially be reclassified as being in another grade. It is not uncommon for a number of students in their second year of high school to have an official grade designation of 9<sup>th</sup> grade. The “cohort grade” information is based on the year the student entered the school. This shows the number of new 9<sup>th</sup> grade students at each school.

Also included in this section is information on the number, home attendance area, and school attended for 9<sup>th</sup> grade students assigned through the Open Choice process. A total of 525 students were assigned, with Franklin having the most (100) and Rainier Beach having the fewest (17). Demographic information is also provided for students assigned through Open Choice.

During the development of the NSAP, the Board considered implementing a “poverty” tiebreaker for high schools. A decision on this was deferred until data became available to see what the Open Choice process and assignments would yield.

The three attendance area high schools with the lowest percentages of students eligible for Free/ Reduced Lunch (FRL) are Ballard (22%), Hale (26%), and Roosevelt (19%). Worth noting is that the percentages of Open Choice students assigned to these schools are, in all three cases, higher than the schools’ overall percentages. Among Open Choice assignments to Ballard, 28% of the students are eligible for FRL; 28% at Hale, and 25% at Roosevelt.

In some cases, numbers are small and percentages should definitely be viewed with caution. However, if this pattern continues in subsequent years, the NSAP may yield a more balanced distribution of students eligible for FRL in attendance area high schools through the school choice process.

## **Section 7: Services and Programs – Enrollment Trends for English Language Learners**

This section provides information on English Language Learners based on grade, service area, and home attendance area. ELL enrollment dropped significantly between 2005 and 2006. It has been increasing since then, but is still about 450 students lower than in 2005. Over the five year period, elementary enrollment grew slightly, while both middle and high school enrollment declined.

## **Section 8: Services and Programs – Enrollment Trends for Special Education**

This section provides information on students receiving special education services. Information is reported for K-12 totals, as well as separately for students receiving Resource/ICS services and those receiving self-contained services. The number of K-12 students receiving special education services grew by about 350 students between 2005 and 2010, with much of the growth in grades K-5, and almost no growth in grades 9-12. Over the same time period, the number of students receiving self-contained services grew by 80 students, with much of the increase in grades 9-12.

Information is also provided for preschool students receiving special education services. There was a very large increase between 2005 and 2006 where it appears that the number of preschool students served more than doubled. However, this is due to a change in how the State documents enrollment for IDEA Part C (Birth to Three) and IDEA Part B (which begins on a student's third birthday). The State apportions funding for both Part C and Part B services to reflect our student numbers, and the State began counting those numbers together.

### **Section 9: Services and Programs – Enrollment Trends for Accelerated Progress Program**

APP serves students who are Academically Highly Gifted. This section provides information by grade as well as by home attendance and service area.

As shown, APP enrollment has grown over the past five years, now serving about 300 more students than five years ago. About half of the growth is in grades 1-5. The largest increase in elementary school is at 2<sup>nd</sup> grade, where APP enrollment has more than doubled over five years ago. Grades 1-5 enrollment in APP is almost 150 students higher now than it was five years ago.

### **Section 10: Services and Programs – Enrollment Trends for Spectrum**

Spectrum serves students who are Academically Gifted. This section provides information by grade as well as by home attendance and service area. As shown, enrollment has grown by more than 450 students over five years ago.

Also shown is 6<sup>th</sup> grade waiting list information for Spectrum. As of October 1, 2011 when waiting lists are dissolved, there were 39 students on waiting lists for Spectrum. More than half of those students were on the waiting list for Spectrum at an out of attendance area school. There were 18 students on waiting lists for Spectrum at their attendance area middle school.

### **Section 11: Student Demographics**

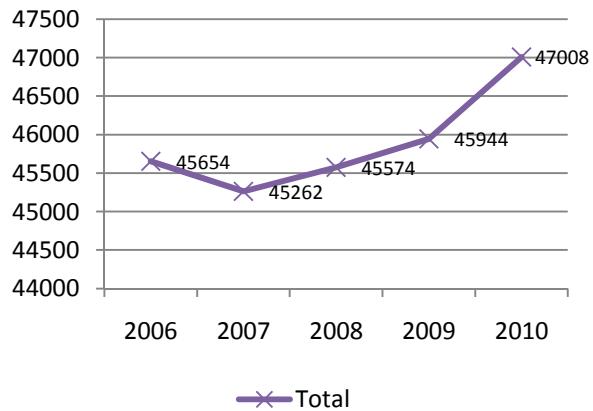

The full impact of the NSAP on school diversity cannot be known after a single year, of course, and demographic changes are not attributable solely to the NSAP. Significant enrollment growth in the district (an increase of 1,064 students this year over last) also impacts changes in school data.

A series of tables and graphs provides data by school on race/ethnicity, poverty (based on Free/Reduced Meals eligibility), and the numbers of students receiving ELL and special education services. The tables also provide a comparison between the demographic estimates used in developing the NSAP and current data.

Notes:

- 1) First choice data for 2010 cannot be compared directly to 2009 or other prior year data for attendance area schools. This is because in 2009 and before ALL families completed applications during the open enrollment period or received a mandatory assignment at the end of the open enrollment process. In 2010, only families who wanted a school that was different from the attendance area or other designated school applied.
- 2) Includes only "on-time" applications for all programs except self-contained Special Ed.
- 3) Includes early sibling applications through 2009.

1) Waitlist data for 2010 cannot be compared directly to 2009 or other prior year data for attendance area schools. This is because in 2009 and before ALL families completed applications during the open enrollment period or received a mandatory assignment at the end of the open enrollment process. In 2010, only families who wanted a school that was different from the attendance area or other designated school applied.

2) Includes only "on-time" applications for all programs except self-contained Special Ed.

\* McDonald and Sand Point are not shown since those schools did not operate during 2009-10; there were no older siblings enrolled in 2009-10 that would impact assignments for 2010-11.

\*\* Graham Hill has two entry grades: PreK (3-year-olds) for the Montessori program, and K for the general education program. Information includes combined data to reflect both entry grades.
